SUMMARY

Associate Software Engineer at Accenture with hands-on training in GCP Data Engineering and experience building end-to-end data-driven applications. Proficient in Python and SQL, with a strong focus on designing APIs, processing structured data, and developing scalable data workflows. Built and deployed multiple machine learning systems, applying feature engineering, model optimization, and real-time inference. Actively transitioning toward data engineering roles with an emphasis on cloud-based pipelines and production-ready systems.

SKILLS

Data Engineering & Cloud : GCP (BigQuery, Cloud Storage, Pub Sub, Dataflow), Data Processing, ETL & ELT Concepts
Programming & Database: Python, SQL, MySQL
ML & Data : Scikit-learn, Pandas, Numpy, Feature Engineering, Model Deployment, EDA
Backend & API: FastAPI, REST API Development

EXPERIENCE

Associate Software Engineer (ASE)
Accenture **Mar 2026 – Present**

- Completed structured training in **GCP Data Engineering**, covering cloud-based data storage, processing, and pipeline concepts
- Gained hands-on exposure to **data workflows, ETL principles, and scalable data architectures**
- Working in a professional development environment with focus on backend systems and data handling

PROJECTS

Dynamic E-commerce Intelligence Platform Live link | Github **Oct 2025-Nov 2025**
FastAPI, Python, Scikit-learn, Pandas

- Engineered a unified ML platform integrating sales forecasting (95% R^2), churn scoring, sentiment classification (94%/89% precision), and product recommendations, using feature engineering, sparse matrices, and model optimization for real-world e-commerce workflows.
- Architected a FastAPI-based inference system with modular endpoints for each ML module, enabling real-time predictions with millisecond latency through CSR-based cosine similarity KNN retrieval.
- Delivered a fully interactive dashboard using HTML/CSS/JavaScript, allowing users to generate instant predictions across all modules, powered by versioned ML models and API-based live inference.

Bangalore House Price Prediction System – Live link | *Github* | Blog **July 2025**
FastAPI, Python, Scikit-learn, Pandas, NumPy

- Developed an end-to-end ML system achieving 84% R^2 using location-based feature engineering, outlier removal, and rigorous preprocessing of 1,300+ real estate datapoints from the Kaggle dataset.
- Implemented production-ready deployment through FastAPI, creating REST APIs that serve real-time house price predictions with serialized model artifacts (model.pkl, columns.json).
- Deployed an interactive client-facing web app using JavaScript and GitHub Pages, enabling users to dynamically input features like BHK, area, location, and bathrooms with zero-cost cloud hosting.

EDUCATION

CMR Institute of Technology, Hyderabad. **Dec 2021-Apr 2025**
B.Tech, Computer Science & Engineering (AI & ML), CGPA:8.22
